SAFETY PRECAUTIONS

Read owner's manual completely before operating unit!

- Secure Lift Master Boom to fork truck carriage with safety chain.
- Never stand underneath lift device when in use.
- Be sure fork mast is tilted back toward driver.

RECEIVING INSTRUCTIONS

It is possible that a unit may incur damage during transit. If damage is noticed when unloading, make a note of it on the **BILL OF LADING**. Remove all packing and strapping material, then inspect the unit again for damage. **IF DAMAGE IS EVIDENT, FILE A CLAIM WITH THE CARRIER IMMEDIATELY!** Finally, check the design specifications to ensure they match those as requested (i.e. model type, capacity, etc...)

INSTALLATION INSTRUCTIONS

STEP 1 - Insert forks through fork pockets of Boom so that the back side of boom is in contact with fork carriage of fork truck.

STEP 2 - Attach safety chain to fork truck carriage.

STEP 3 - Tilt fork carriage and mast back toward the driver so that boom does not slide off forks.

STEP 4 - Make desired adjustments to boom length by sliding the inner extension tube in or out of main tube, and locking it down with infinite locking screw.

WARRANTY

This product is warranted for one year from date of purchase to be free of manufacturing defects in material and workmanship.

This warranty does not cover normal wear of parts or damage resulting from any of the following: negligent use or misuse of the product, use or application contrary to installation instructions, or disassembly, repair or alteration by any person prior to authorization from a factory representative.

OPERATING INSTRUCTIONS - LM SERIES

You must carefully read and understand all of the following instructions before using the lifting boom.

Consult the manufacturer for any questions not resolved to your satisfaction in this owner's manual.

“ The center-of-gravity and lost-load information for all the boom models is provided in the owner's manual.

Always consult the chart to determine the load rating of your boom's model at the given distance from, and angle to, the fork truck's carriage.

Attaching the lifting boom to a fork truck:

Insert the fork truck's forks through the lifting boom's fork tubes until the fork tubes are fully back against the face of the fork truck's forks.

Secure the lifting boom to the fork truck by wrapping the lifting boom's securing chain around the vertical member of the fork carriage. Pull the chain as tight as possible, then fasten the snap hook at the free end of the chain back onto a chain link so that there is no slack in the chain.

Positioning the boom for lifting a load:

Caution: Secure the boom to the fork truck as indicated before attempting to adjust the boom length or angle.

To extend the boom (telescoping models only) -- Raise the boom to a comfortable height. Loosen the star knob, located at the end of the boom. Grasp the boom's end cap with both hands, and pull the end of the boom outward. When the boom is extended to the length desired, tighten the star knob. Verify that the load rating of the boom is adequate for the intended load and extended length. Load ratings are charted in the owner's manual.

To change the angle of the orbital boom (models OBT and OBNT): -- Note: It is strongly recommended that this adjustment be performed by two individuals working together. Firmly grasp the boom's pivot handle with one hand, remove the pivot locking pin with the other, and position the boom angle so that the hook is at the desired height. Reinstall the pivot locking pin.

- *Caution:* Consult the fork truck owner's manual for the forklift's capacity at the distance of the load's center-of-gravity from the fork truck's mast.

Operation and Use:

Before using the work platform, review all of the items in the "Warnings and Safety Instructions" section, included herein!

Consult standard ANSI / ASME B56.1-2000, "Safety Standard For Low Lift And High Lift Fork Trucks," for further information regarding proper procedures to be used when operating a fork truck with a lifting boom attached.

- “ Tilt the fork truck's mast back before attaching a load to the lifting boom.
- “ Use a lifting chain, nylon strap, or choker to connect the load to the lifting boom.
Both of the lifting hooks can be used simultaneously to lift a load.
- “ Alert personnel in the area to stand at a safe distance from the load before attempting to lift it.
- “ Lift the load slowly.
- “ Watch the rigging and the load carefully for slippage or uneven lifting. Lower the load and adjust the rigging as necessary to ensure the load will remain stable while hanging from the lifting boom.
- “ Keep the load as close to the ground as possible whenever it is being moved.
- “ Do not exceed two feet/second when moving loads.
- “ Avoid bumps, potholes, and inclined surfaces when transporting a load.
- “ Lower the load into place. Be certain that the load is stable and well-supported before attempting to remove the rigging.
- *Warning:* Improper rigging practices could result in injury to personnel or damage to property.
- *Caution:* Use only properly-rated lifting chains, nylon straps, and chokers and connecting hardware when lifting loads with the lifting boom.
- *Caution:* Do not exceed the rated lifting capacity of the boom, indicated on the chart provided herein.
- *Caution:* All personnel must maintain a safe distance from loads during lifting and while loads are raised.
- *Caution:* Use the lifting boom only on a smooth, level, finished surface. Avoid sudden stops or quick turns.
- *Caution:* Set the parking brake before dismounting from the fork truck when the lifting boom is attached.
- *Caution:* Do not use the lifting boom if it has apparent damage.

Ordering Replacement Parts

We take pride in using quality parts on the equipment we manufacture. We are not responsible for equipment problems resulting from the use of unapproved replacement parts.

To order replacement or spare parts for this equipment, contact the factory.

In any communication with the factory please be prepared to provide the lifting boom's serial number.

LM Series Booms Certificate of Assurance & Testing

Certificate of Assurance

This certificate is your assurance that our Lift Master Series Fork Truck Booms and attachments are manufactured in accordance with our interpretations of ANSI Standard B56.1 Low Lift and High Lift Trucks. It is the responsibility of the user to adapt to federal, state, or local laws. Some portions of Federal OSHA Regulations are the responsibility of the user to fulfill, i.e., 29CFR1910.178 Powered Industrial Trucks (a)(4) *“Modifications and additions which affect capacity and safe operation shall not be performed by the customer or user without manufacturers prior written approval. Capacity, operation, and maintenance instruction plates, tags, or decals shall be changed accordingly”*. The user is responsible to use the equipment safely, in a manner for which it was designed, and within its rated capacity. Please contact the manufacturer for further assistance. Thank you for your interest in our product.

Certificate of Testing

This document is to certify that Vestil's Lift Master series Fork Truck Booms have been tested up to 125% and no less than 100% of the rated capacity. After testing this unit, visual inspection showed no cracking of welds or permanent deformation of any members, or any other defects.

Random testing and inspections should be conducted by the end user to ensure safe working condition. Always consult the fork truck manufacturer before using this on any fork truck to have the truck recertified. This unit is built in compliance with all applicable OSHA and ANSI Standards.
